

Heinrich Rohdenburg

LANDSCAPE ECOLOGY – GEOMORPHOLOGY

CATENA paperback

Contents

Preface

In Memory of Heiner Rohdenburg

1	Introduction: Geomorphology and Landscape Ecology	1
2	Landform development by periglacial processes	6
2.1	Periglacial	6
2.1.1	Soil displacement by freeze-thaw	9
2.1.2	Slide movements	10
2.1.3	Soil flowage due to supersaturation	10
2.1.4	Sorting	10
2.1.5	Movements of soil caused by differences in density	12
2.1.6	Soil movement caused by hydrostatic pressure	12
2.1.7	Development of fissures in the active layer	13
2.2	A genetic classification of periglacial soil differentiation in the active layer	13
2.3	Formation by gelisolifluction	18
3	Landform development by surface runoff	25
3.1	Streamdynamics	40
3.2	Stream long profile	40
3.3	The channel pattern	45
3.3.1	River terraces	48
3.3.2	Stream channel pattern types	51
3.4	Stream long profile and stream channel pattern	52
4	Tectonics and morphodynamics	57
4.1	Tectogenetic landform development cycles	64
4.1.1	The spatial subdivision of regions with uniform tectonics	65
4.1.2	The interference between basigenous and tectogenetic landform development cycles	65
4.2	Differentiation of morphodynamics by weathering and bedrock patterns.	
	Climatic-zonal differences	69
4.3	Effects of differing rock resistance	78
4.4	Differentiation of relief on the basement rocks and on the sedimentary rock covers	84
4.5	Vegetation and landform development	89
4.6	Feedback between vegetation and geomorphodynamics	92
5	Climatic change and geomorphodynamics	97
6	Extreme aridity — dry periods	108
7	Are there zones of valley development and of planation?	112
8	Interference of climatic cycles with differing characteristics	116
9	The interference of climatic variations with the effects of tectonics and baselevel changes	120
9.1	Long term increasing aridity of the climate	126
9.2	Long term increasing humidity of the climate	129
9.3	Long term changes in temperature	130
9.4	Effects of simultaneous decrease of temperature and humidity and of a lowering of baselevel	134
9.5	The effect of simultaneous increases in temperature and precipitation and of a rise in sealevel	136
9.6	Additional ways of distinguishing between the influence of tectonics and climatic changes	136
10	Geomorphology of the climatic zones	138
11	The wet-dry tropics	141
