### 1. Introduction — Fundamental Questions

1

- 1.1 What is palaeontology? 1
- 1.2 What is a fossil? 1
- 1.3 What features and conditions are favourable for preservation? 1
- 1.4 Of what materials are 'hard parts' composed? 2
- 1.5 Can a complete organism become fossilized? 3
- 1.6 What are the main changes during fossilization? 3
- 1.7 What are moulds and casts? 4
- 1.8 How do fossils 'date' rocks? 4
- 1.9 What are fossils 'occurring *in situ*'? 5
- 1.10 What are 'derived' fossils? 6
- 1.11 How may fossils be used as indicators of environment? 6
- 1.12 What is taxonomy? 8
- 1.13 Who creates the classification? 9
- 1.14 What is 'numerical taxonomy'? 10
- 1.15 Welcome to palaeontology 11

### 2. The Origin of Life and the Earliest Fossils

12

- 2.1 When and how might life have begun? 12
- 2.2 What can geology tell us about this early life? 13
- 2.3 Precambrian animals 13
- 2.4 The Phanerozoic begins 14

### 3. Trilobites

16

- 3.1 Introduction 16
- 3.2 Ecdysis 16
- 3.3 Morphology 16
  - 3.3.1 Facial sutures 18
  - 3.3.2 Eyes 18
  - 3.3.3 Limbs 19
- 3.4 The nature of the trilobite cuticle 20
- 3.5 Life cycle and development 21
- 3.6 Classification 22
- 3.7 Mode of life 23
- 3.8 Geological history and stratigraphic value 26

### 4. Graptolites

30

- 4.1 Introduction 30
- 4.2 Morphology 30
  - 4.2.1 Dendroids 30
  - 4.2.2 Graptoloids 32
- 4.3 Classification of the graptoloids 33
- 4.4 The structure of the graptolite periderm 34

4.5 Graptolite affinities. What was the graptolite animal?	35
4.6 Mode of life	36
4.7 Geological history and stratigraphic value	37
<b>5. Brachiopods</b>	<b>44</b>
5.1 Introduction	44
5.2 Morphology and internal anatomy	44
5.2.1 Soft parts	44
5.2.2 Hard parts (articulates)	45
5.2.3 Hard parts (inarticulates)	47
5.3 Shell growth, composition and structure	49
5.4 Design and mechanics of articulate hinges	50
5.5 Mode of life	52
5.6 Classification	53
5.7 Geological history and stratigraphic value	55
	60
<b>6. Molluscs</b>	<b>64</b>
6.1 Introduction	64
6.2 General molluscan anatomy	64
6.3 A diversity of molluscs	64
6.4 Growth in coiled shells	65
I. GASTROPODS	66
6.5 Soft parts and life cycle	66
6.6 Shell form	67
6.7 The anatomical consequences of torsion	69
6.8 Archaeogastropods	69
6.9 Caenogastropods	69
6.10 Pulmonates	69
6.11 Mode of life	71
6.12 Evolutionary history and geological value	72
II. CEPHALOPODS	72
6.13 Soft parts and life cycle	74
6.14 Shell form	74
6.14.1 Cameral deposits	75
6.14.2 Coiling	75
6.14.3 Shell aperture	76
6.14.4 Opercula	77
6.14.5 Ornament	77
6.15 Belemnites	78
6.16 Ammonites	79
6.17 Mode of life	79
6.18 Sexual dimorphism	79
6.19 Geological history and stratigraphic value	82
III. BIVALVES	83
6.20 Soft parts and life cycle	84
6.21 Shell form	84
6.22 Mode of life	88
6.22.1 Burrowing and boring	93
6.22.2 Byssal tethering and free living	93
6.22.3 Cementation	96
6.23 Geological history and stratigraphic value	98
	98
<b>7. Echinoderms</b>	<b>99</b>
7.1 Introduction	99
I. ECHINOZOA — CLASS ECHINOIDEA	99
7.2 Shell form and soft parts of a regular echinoid	99
7.3 Irregular echinoids	99
7.4 Mode of life	101
7.5 Spired echinoids, sand dollars and echinoid infaunalism	101
7.6 Geological history and stratigraphic value	102
II. CRINOZOA — CLASS CRINOIDEA	105
7.7 Skeletal construction	106
7.8 Mode of life	106
7.9 Geological history and stratigraphic value	107
	108

<b>8. Corals and Stromatoporoids</b>	<b>110</b>
I. CORALS	
8.1 The coral animal	110
8.2 The coral skeleton	110
8.3 The colonial habit	110
8.4 Rugose corals	111
8.5 Tabulate corals	113
8.6 Scleractinian corals	114
8.7 Geological history and stratigraphic value	116
II. STROMATOPOROIDS	
<b>9. Vertebrates</b>	<b>121</b>
9.1 Introduction	121
9.2 The vertebrate plan	121
9.3 Jawless fishes	122
9.4 The origin of jaws and lateral fins	122
9.5 The origin of bone and lungs	123
9.6 Amphibians and terrestrial vertebrates	125
9.7 Goodbye to the egg — the origin of mammals	127
9.8 The process of man's emergence	129
<b>10. Microfossils</b>	<b>130</b>
10.1 When is a fossil a microfossil?	130
10.2 The unicellular organism and the five kingdoms	130
10.3 Size and scale in single cells	131
10.4 Kingdom Monera	131
10.4.1 Blue-green algae	131
10.5 Kingdom Protista	132
10.5.1 Dinoflagellates	132
10.5.2 Diatoms	132
10.5.3 Coccoliths	133
10.5.4 Radiolaria	134
10.5.5 Foraminifera	135
10.6 Kingdom Planta — spores and pollen	135
10.6.1 The alternation of generations and the rise of land plants	135
10.6.2 Typical spore and pollen morphology	138
10.6.3 Geological and stratigraphic value	140
10.7 Kingdom Animalia	140
10.7.1 Ostracods	140
10.7.2 Conodonts	142
<b>11. Vascular Plants</b>	<b>144</b>
11.1 Introduction	144
11.2 Palaeozoic plants without seeds	144
11.2.1 'Psilophytes'	144
11.2.2 Lycopsidea	144
11.2.3 Sphenopsida	147
11.2.4 The origin of true leaves	148
11.2.5 The 'fern' complex	148
11.2.6 Filicopsida	148
11.2.7 Plant evolution reflected in Devonian spore assemblages	148
11.3 Seed plants of the pre-Permian	148
11.3.1 Pteridospermales	148
11.3.2 Cordaitales	148
11.3.3 Coniferales	150
11.4 Non-flowering plants of the Permian and post-Permian	150
11.4.1 Ginkgoales	150
11.4.2 Cycadales and Bennettitales	151
11.5 Flowering plants	152
11.5.1 Angiospermopsida	152

**12. The Meaning of Fossils**

12.1 Design, function, purpose	154
12.2 The function of the ammonite septum	155
12.3 The persistent paradigm	156
12.4 Perfect and not so perfect	156
12.5 Variation and natural selection	158
12.6 Natural selection under changing conditions	158
12.7 Some evolutionary case histories	159
12.7.1 Industrial melanism in the peppered moth	159
12.7.2 Evolution in Cretaceous irregular echinoids	159
12.7.3 The evolution of horses	161
12.8 Evolutionary trends and 'orthogenetic' theories	161
12.9 Small steps and giant leaps	162
12.10 Extinction	163
