Part I THE PHYSICOCHEMICAL PROCESSES OF PEDOGENESIS

Introduction and definitions	3
1 Weathering and clay formation	5
I General introduction	5
II Geochemical weathering: total hydrolysis and neoformation of clay	9
III Biochemical weathering: dominated by gradual hydrolysis and transformations	12
IV Influence of environmental factors on weathering	17
V Conclusion	22
References	26
2 The dynamics of organic matter	28
I Introduction	28
II Biological humification: biochemical processes	32
III The effect of environmental factors on biological humification	37
IV The slow development of humic materials; maturation	49
V Classification of humus	53
VI Conclusion	63
References	64
3 The movement of material within soils	67
I Introduction and definitions	67
II Mechanisms of migration: eluviation and illuviation	71
III Biogeochemical cycles and biological processes of upward movement	86
IV Influence of environmental factors on the transport of material within soils	96
V Conclusion	104
References	104

4	General principles of the origin and development of soils	page	108
	I Soil development cycles: definitions		108
	II The time factor: determination of soil age		112
	III Effect of environmental factors on development cycles		119
	IV Study of long cycles		141
	V Conclusion		152
	References		153
<i>Part II PEDOGENESIS: THE BASIS OF SOIL CLASSIFICATION</i>			
5	Soil classification		159
	I General introduction		159
	II Criteria used in modern classifications		161
	III Definition and hierarchical position of taxonomic units: horizons		165
	IV The American classification (soil taxonomy)		168
	V FAO classification		173
	VI The proposed environmental classification		175
	References		180
6	Immature soils and soils with little profile differentiation		182
	A Immature soils		182
	I General characters and classification		182
	II Immature climatic soils		183
	III Immature erosional soils		185
	IV Immature depositional soils		185
	B Unsaturated humic soils		189
	I Introduction		189
	II Rankers		191
	III Andosols		196
	References		209
7	Calcimagnesian soils		211
	I Introduction: general characters		211
	II Environment, morphology and biochemistry of the basic types		212
	III Formation of humus-carbonate complexes: biochemical and geochemical processes		217
	IV Development of calcimagnesian soils in temperate plainlands		220
	V Development of calcimagnesian soils at high altitude		225
	VI Classification of calcimagnesian soils: main types		228
	References		234

8	Soils with matured humus: isohumic soils and vertisols	page	236
	A Isohumic soils		237
	I General characters		237
	II Isohumic soils with saturated complex		238
	III Brunified isohumic soils: brunizems or phaeozems		248
	IV Fersiallitic isohumic soils		250
	V Soils of arid regions		257
	B Vertisols		258
	I General characters		258
	II Vertisol profile: environment, morphology, properties		259
	III Development of vertisols		262
	IV Main types of vertisols: problems of classification		265
	References		268
9	Brunified soils		270
	I General characters		270
	II Temperate brown soils		273
	III Temperate lessived soils		285
	IV Boreal lessived soils		300
	References		303
10	Podzolised soils		306
	I General characters		306
	II Podzolised soils with little or no hydromorphism		309
	III Hydromorphic podzolised soils		326
	References		333
11	Hydromorphic soils		335
	I General characters		335
	II Soils with perched water table of pluvial origin		340
	III Soils with a deep phreatic water table: gleys		353
	IV Organic hydromorphic soils: peats		359
	V Related hydromorphic soils: capillary absorption and impoverishment of materials rich in fine clays		362
	References		371
12	Sesquioxide-rich soils		373
	I General characters		373
	A Fersiallitic soils		377
	I The morphological and geochemical characters of fersiallitic profiles		379
	II The dynamics of fersiallisation		384
	III Main types of fersiallitic soils: classification		390

B Ferruginous soils	<i>page</i> 394
I Profiles of ferruginous soils: morphological and geochemical characters	395
II Development of ferruginous soils and ferrisols	398
III Classification of ferruginous soils	402
C Ferrallitic soils	405
I General characters	405
II The morphology and geochemistry of ferrallitic profiles	408
III Physicochemical process of ferrallitisation	413
IV Classification and main types of ferrallitic soils	420
References	422
13 Salsodic soils	426
I General characters	426
II Study of salsodic profiles: environment, morphology, geochemistry	428
III The dynamics of ionic equilibria	431
IV Development of salsodic soils: role of environmental factors	435
V Summary: classification of salsodic soils	438
VI Properties and utilisation of salsodic soils	439
References	441
Index	443
