Preface		xv
Introduction		1
Part I Continuum and fracture		15
1 Basic mechanical principles of the theory of tectonic earthquake sources		17
1.1 Definition of the tectonic earthquake source; theory of elastic rebound		17
1.2 Kinematics of a continuous medium		28
1.3 Dynamics of a continuous medium		42
2 General concepts of fracture mechanics		53
2.1 Introduction		53
2.2 Energy conservation law		62
2.3 Conditions of dynamic fracture onset and arrest		68
2.4 Conclusions to Part I		81
Part II Inversion for source parameters		87
3 The inverse problem of earthquake source theory		89
3.1 Green-Volterra formula; Green's tensor in linear elastodynamics		90
3.2 General solution to the kinematic dislocation problem; formulation of the inverse problem		93
3.3 Formulation of the inverse problem for far-field body waves		101
3.4 First arrivals of body waves		112

3.5	Spectral representation of the inverse problem	123
3.6	Solution to the basic equation; uniqueness theorem	128
3.7	Instability of the solution	132
3.8	Smoothed solution to the inverse problem	138
4	Seismic moment tensor	142
4.1	Long-wave approximation	142
4.2	Determination of the seismic moment tensor from observations	146
4.3	Seismic moment versus stress estimates at the source	148
4.4	Seismic energy	150
4.5	Seismic moment tensor and seismic flow of rocks	158
4.6	Asperity model	164
Part III	Specific earthquake source models	169
5	The boundary-integral equation method	174
5.1	Representation relations	174
5.2	Discrete representations	178
5.3	The circular self-similar shear crack	182
5.4	The finite circular shear crack	188
5.5	A crack with dry friction	191
5.6	Spontaneous cracks	195
5.7	General formulation of the boundary conditions on the fault	223
6	Far-field radiation from numerical source models	225
6.1	The initial pulse shape	225
6.2	Far-field radiation from simple faulting models	227
6.3	The heterogeneous faulting processes	234
	Appendixes	259
1	Kernels of the integral representations (5.1.9) and (5.1.3)	259
2	Approximation and stability properties of the representation relations	268
	References	272
	Additional reading	281
	Index	283
