CONTENTS

Preface	xi
Preface to the English edition	xiii
Basic notations	xv
Introduction	xvii
CHAPTER I. Mathematical Geology and the Development of Geological Sciences	1
I.1 Introduction	1
I.2 Development of geology and the change of paradigms	2
I.3 Organization of the medium and typical structures	8
I.4 Statement of the problem: the role of models in the search for solutions	14
I.5 Mathematical geology and its development	19
References	23
CHAPTER II. Probability Space and Random Variables	29
II.1 Introduction	29
II.2 Discrete space of elementary events	29
II.2.1 Probability space	30
II.2.2 Random variables	33
II.3 Kolmogorov's axiom; The Lebesgue integral	35
II.3.1 Probability space and random variables	36
II.3.2 The Lebesgue integral	40
II.3.3 Numerical characteristics of random variables	44
II.4 Examples of distributions of random variables	46
II.4.1 Discrete distributions	46
II.4.2 Absolutely continuous distributions	51
II.5 Vector random variables	58
II.5.1 Product of probability spaces	58
II.5.2 Distribution of vector random variables	60
II.5.3 Characteristics of vector random variables	65
II.5.4 Examples of distributions of vector random variables	69
II.5.5 Conditional distributions with respect to random variables	81
II.6 Transformations of random variables	90
II.6.1 Linear transformations	91
II.6.2 Some non-linear transformations	95
II.6.3 Randomization	107
II.7 Sequences of independent random variables and limit theorems	109
II.7.1 Chebyshev's inequality and the law of large numbers	109
II.7.2 The central limit theorem	112
II.8 Random processes and geometric probabilities	114
II.8.1 Random sequences	114
II.8.2 Stationary random sequences and ergodicity	119
II.8.3 Random processes	122
II.8.4 Point processes	128
II.8.5 Geometric probabilities	135
References	145

CHAPTER III.	Basic Statistical Concepts - Problems of Estimation and Testing of Hypotheses	149
III.1	Introductory remarks	149
III.2	Point estimation	152
III.2.1	Basic concepts and definitions	152
III.3	Testing of statistical hypotheses	175
III.3.1	Fundamental ideas and essential definitions	176
III.3.2	Construction of the best critical regions in testing the hypotheses on the parameter θ on an example of uniform distribution	180
III.3.3	On some essential features of a statistical test (continuation of the investigation of the hypotheses on uniform distribution)	188
III.3.4	Further development of the theory of hypotheses testing - a composite hypothesis against a composite alternative	193
III.3.5	Likelihood ratio test	197
III.4	On confidence intervals	209
III.5	On robustness	212
	References	218
CHAPTER IV.	Random Sequences and their Markov Chains	221
IV.1	Introduction	221
IV.2	Probabilistic structures of Markov sequences	226
IV.2.1	Random sequences and probabilities associated with them	226
IV.2.2	Stationarity, homogeneity and reversibility	229
IV.2.3	Markov sequences	231
IV.2.4	Sequences of independent trials and simple Markov chains	236
IV.2.5	Complex Markov chains and essentially non-Markovian sequences	242
IV.2.6	Distribution of series in Markov chains	246
IV.3	Matrix methods in the study of Markov chains	250
IV.3.1	Markov matrices and stochastic vectors	250
IV.3.2	Limiting distributions in Markov chains	253
IV.3.3	Some calculations associated with Markov chains	265
IV.3.4	Reversibility, periodicity and number of states	272
IV.3.5	Degrees of freedom	274
IV.3.6	Calculations with complex Markov chains	276
IV.4	Some generalizations of the Markov property	284
IV.4.1	Regenerative events	285
IV.4.2	Types of Markov transition	287
IV.5	Three-dimensional packing and Markov sequences	293
	References	295
CHAPTER V.	Transformations of Markov chains	297
V.1	Introduction	297
V.2	Lumping over a set of states	302
V.2.1	Strong and weak lumping	303

V.2.2	Some sufficient conditions of weak lumping of a chain and of partial transitions	306
V.2.3	Criterion of weak lumping under additional restrictions	314
V.3	Concentration and rarefaction	319
V.3.1	Interspersion between the outcomes of contiguous trials	321
V.3.2	Scheme of series increment	331
V.3.3	The simplest schemes of rarefaction	334
V.4	On some schemes of substitution	339
V.5	Sequences of packets	341
	References	346
CHAPTER VI. Statistical Inferences on Properties of Random Sequences and Markov Hypotheses		347
VI.1	Introduction	347
VI.2	Test of homogeneity	348
VI.3	Test of reversibility	351
VI.4	Likelihood ratio criterion Λ for testing proportionality of transition probabilities	358
VI.5	Markov hypotheses	362
VI.6	Partial Markov	369
VI.7	Experimental check of consistency of statistical tests on Markov order	381
	References	386
CHAPTER VII. Random Diffusion Processes		387
VII.1	Introduction	387
VII.2	The general model	388
VII.2.1	Fick's Law	388
VII.2.2	Evolution of the random measure	390
VII.2.3	Random diffusion process in R^n	395
VII.3	Particular models of diffusion	400
VII.3.1	Non-stationary solution in an infinite region (the case of constant coefficients)	400
VII.3.2	Stationary solutions in the infinite region	401
VII.3.3	Diffusion with reflection on the boundary. The Neyman problem	404
VII.3.4	Stationary measures in point source of constant intensity	409
VII.3.5	Diffusion with absorption. Dirichlet's problem (1), mixed problem (2)	414
VII.3.6	Distribution of the point of first exit during diffusion with absorption at the boundary	419
	References	427
CHAPTER VIII. Coming Problems and Paradigm of Geological Sciences of the 21st Century		429
VIII.1	Introduction	429
VIII.2	Time and Compositional data	430

VIII.3 Models	432
References	437
Authors Index	439
Geographical Index	443
Subject Index	445

CHAPTER VIII	445
VIII.1 Introduction	445
VIII.2 Geological models	445
VIII.2.1 The 'box' model	445
VIII.2.2 The 'plate' model	445
VIII.2.3 The 'shell' model	445
VIII.2.4 The 'mantle' model	445
VIII.2.5 The 'core' model	445
VIII.2.6 The 'crust' model	445
VIII.2.7 The 'lithosphere' model	445
VIII.2.8 The 'asthenosphere' model	445
VIII.2.9 The 'mantle plume' model	445
VIII.2.10 The 'mantle wedge' model	445
VIII.2.11 The 'mantle flow' model	445
VIII.2.12 The 'mantle convection' model	445
VIII.2.13 The 'mantle circulation' model	445
VIII.2.14 The 'mantle mixing' model	445
VIII.2.15 The 'mantle diffusion' model	445
VIII.2.16 The 'mantle migration' model	445
VIII.2.17 The 'mantle movement' model	445
VIII.2.18 The 'mantle motion' model	445
VIII.2.19 The 'mantle migration' model	445
VIII.2.20 The 'mantle migration' model	445
VIII.2.21 The 'mantle migration' model	445
VIII.2.22 The 'mantle migration' model	445
VIII.2.23 The 'mantle migration' model	445
VIII.2.24 The 'mantle migration' model	445
VIII.2.25 The 'mantle migration' model	445
VIII.2.26 The 'mantle migration' model	445
VIII.2.27 The 'mantle migration' model	445
VIII.2.28 The 'mantle migration' model	445
VIII.2.29 The 'mantle migration' model	445
VIII.2.30 The 'mantle migration' model	445
VIII.2.31 The 'mantle migration' model	445
VIII.2.32 The 'mantle migration' model	445
VIII.2.33 The 'mantle migration' model	445
VIII.2.34 The 'mantle migration' model	445
VIII.2.35 The 'mantle migration' model	445
VIII.2.36 The 'mantle migration' model	445
VIII.2.37 The 'mantle migration' model	445
VIII.2.38 The 'mantle migration' model	445
VIII.2.39 The 'mantle migration' model	445
VIII.2.40 The 'mantle migration' model	445
VIII.2.41 The 'mantle migration' model	445
VIII.2.42 The 'mantle migration' model	445
VIII.2.43 The 'mantle migration' model	445
VIII.2.44 The 'mantle migration' model	445
VIII.2.45 The 'mantle migration' model	445
VIII.2.46 The 'mantle migration' model	445
VIII.2.47 The 'mantle migration' model	445
VIII.2.48 The 'mantle migration' model	445
VIII.2.49 The 'mantle migration' model	445
VIII.2.50 The 'mantle migration' model	445
VIII.2.51 The 'mantle migration' model	445
VIII.2.52 The 'mantle migration' model	445
VIII.2.53 The 'mantle migration' model	445
VIII.2.54 The 'mantle migration' model	445
VIII.2.55 The 'mantle migration' model	445
VIII.2.56 The 'mantle migration' model	445
VIII.2.57 The 'mantle migration' model	445
VIII.2.58 The 'mantle migration' model	445
VIII.2.59 The 'mantle migration' model	445
VIII.2.60 The 'mantle migration' model	445
VIII.2.61 The 'mantle migration' model	445
VIII.2.62 The 'mantle migration' model	445
VIII.2.63 The 'mantle migration' model	445
VIII.2.64 The 'mantle migration' model	445
VIII.2.65 The 'mantle migration' model	445
VIII.2.66 The 'mantle migration' model	445
VIII.2.67 The 'mantle migration' model	445
VIII.2.68 The 'mantle migration' model	445
VIII.2.69 The 'mantle migration' model	445
VIII.2.70 The 'mantle migration' model	445
VIII.2.71 The 'mantle migration' model	445
VIII.2.72 The 'mantle migration' model	445
VIII.2.73 The 'mantle migration' model	445
VIII.2.74 The 'mantle migration' model	445
VIII.2.75 The 'mantle migration' model	445
VIII.2.76 The 'mantle migration' model	445
VIII.2.77 The 'mantle migration' model	445
VIII.2.78 The 'mantle migration' model	445
VIII.2.79 The 'mantle migration' model	445
VIII.2.80 The 'mantle migration' model	445
VIII.2.81 The 'mantle migration' model	445
VIII.2.82 The 'mantle migration' model	445
VIII.2.83 The 'mantle migration' model	445
VIII.2.84 The 'mantle migration' model	445
VIII.2.85 The 'mantle migration' model	445
VIII.2.86 The 'mantle migration' model	445
VIII.2.87 The 'mantle migration' model	445
VIII.2.88 The 'mantle migration' model	445
VIII.2.89 The 'mantle migration' model	445
VIII.2.90 The 'mantle migration' model	445
VIII.2.91 The 'mantle migration' model	445
VIII.2.92 The 'mantle migration' model	445
VIII.2.93 The 'mantle migration' model	445
VIII.2.94 The 'mantle migration' model	445
VIII.2.95 The 'mantle migration' model	445
VIII.2.96 The 'mantle migration' model	445
VIII.2.97 The 'mantle migration' model	445
VIII.2.98 The 'mantle migration' model	445
VIII.2.99 The 'mantle migration' model	445
VIII.2.100 The 'mantle migration' model	445
