L. Håkanson · M. Jansson

Principles of Lake Sedimentology

With 187 Figures

Springer-Verlag
Berlin Heidelberg New York Tokyo

Contents

1	**Prologue**	1
2	**Lake Types and Sediment Types**	5
2.1	Lake Classifications	5
2.1.1	Genetic Lake Types	5
2.1.2	Trophic Level Classifications	12
2.1.3	Thermal Lake Types	14
2.2	Sediment Classifications	17
2.2.1	Genetic Sediment Types	19
2.2.2	Descriptive Sediment Classifications	22
2.3	Lake Type versus Sediment Type	24
3	**Methods of Sampling**	32
3.1	General Requirements on Sampling Equipment	32
3.2	Types of Sampling System	37
3.2.1	Number of Samples	39
3.2.2	The Sample Formula	40
3.2.3	Sampling in Different Environments – Statistical Aspects	43
3.2.4	Sub-Sampling	48
3.3	Sediment Traps	53
3.3.1	Physics of Sedimentation in Vessels	53
3.3.2	Geometry of Vessels	56
3.3.3	Practical Aspects	60
3.3.4	Problems with Sediment Traps	61
3.4	The Cone Apparatus for in Situ Determination of Sediment Types	62
3.5	Methods of Defining Concentrations	65
3.6	Sampling of Sediment Pore Water	69
4	**Physical and Chemical Sediment Parameters**	73
4.1	Physical Parameters	73
4.1.1	Water Content	73
4.1.2	Loss on Ignition (Organic Content)	76
4.1.3	Bulk Density	80

4.1.4 Grain Size 82
4.1.4.1 Methods of Analysis 82
4.1.4.2 Grain Size Classifications 84
4.1.4.3 Statistical Definitions 87
4.1.4.4 Grain Size Interrelationships 91
4.2 Chemical Parameters 95
4.2.1 Elemental Composition 95
4.2.2 Organic Carbon Compounds 98
4.2.2.1 Humic Compounds 98
4.2.2.2 Other Organic Substances 100
4.2.3 Minerals in Lake Sediments 101
4.2.3.1 Carbonates 101
4.2.3.2 Silicates 104
4.2.3.3 Iron 107
4.2.3.4 Phosphorus 108
4.2.3.5 Sulfides 112
4.2.3.6 Heavy Metals 113

5 Biological Parameters 118

5.1 Sediment-Living Algae 118
5.2 Macrophytes 121
5.3 Benthic Invertebrates 122
5.3.1 Important Forms of Benthic Animals 123
5.3.2 Feeding Mechanisms and Food Types Among Insects . . 127
5.3.3 Distribution of Benthic Fauna Within Lakes 127
5.3.4 Benthic Lake Typologies 131
5.4 Bacteria 133
5.4.1 Functional Classification of Bacteria 134
5.4.2 Bacterial Turnover of Important Elements 135
5.4.2.1 Oxidation and Reduction of Nitrogen Compounds 135
5.4.2.2 Oxidation and Reduction of Sulfur Compounds 136
5.4.2.3 Oxidation and Reduction of Iron 138
5.4.2.4 Fermentation 138
5.4.2.5 Methane Formation 139
5.4.3 Decomposition of Organic Material – General Concepts 139
5.4.4 Strategies and Methods for Determination of Bacterial Activity 143
5.4.4.1 The Whole-Lake Approach 143
5.4.4.2 Bacterial Activity in Experimental Procedures 143
5.4.4.3 Parameters Reflecting Total Bacterial Activity 145
5.4.4.4 Factors Reflecting Defined Parts of Bacterial Activity . 147

6 Sedimentation in Lakes and Water Dynamics 148

6.1 Physics of Sedimentation in Lakes 148
6.2 Geography of Sedimentation in Lakes 156

6.2.1 River-Mouth Areas 157
6.2.1.1 Delta Sedimentation 157
6.2.1.2 River Plume Sedimentation 159
6.2.1.3 The Borderline Between River Action and Wind/Wave Action 164
6.2.2 Open Water Areas 170
6.2.3 Temporal Variations 174

7 Lake Bottom Dynamics 177

7.1 Definitions 177
7.2 Processes of Resuspension 181
7.2.1 Entrainment 181
7.2.2 Turbidific Sedimentation 184
7.2.3 Wind/Wave Influences 188
7.2.4 Topographical Influences 194
7.3 Methods to Determine Prevailing Bottom Dynamics . . 200
7.3.1 Lake-Specific Methods 201
7.3.1.1 The Energy-Topography Formula 201
7.3.1.2 The Characteristic Water Content Model 202
7.3.2 Site-Specific Methods 204
7.3.2.1 The ETA-Diagram 205
7.3.2.2 The Cone Apparatus 206

8 Sediment Dynamics and Sediment Age 213

8.1 Laminated Sediments 213
8.2 Bioturbation 218
8.2.1 Introduction 218
8.2.2 Patchiness 219
8.2.2.1 Areal Patchiness 219
8.2.2.2 Vertical Patchiness 222
8.2.2.3 Temporal Patchiness 222
8.2.2.4 Species-Specific Patchiness 222
8.2.3 Modelling of Bioturbation/Biotransport 224
8.2.3.1 A Dynamic Model 225
8.2.3.2 An Empirical Model 232
8.3 Sediment Age and Age Determination 237
8.3.1 Methods of Age Determination 237
8.3.1.1 Lead-210 241
8.3.1.2 Cesium-137 243

9 Release of Substances from Lake Sediments – the Example of Phosphorus 244

9.1 Background and Presuppositions 244
9.2 Factors of Importance for Mobilization of Phosphorus . 246
9.2.1 Fractional Distribution of Particulate Phosphorus 246

9.2.2	Redox Conditions	247
9.2.3	pH	248
9.2.4	Microbial Mineralization	249
9.2.5	Equilibrium Reactions	250
9.3	Transport Mechanisms	250
9.3.1	Phosphorus in Sediment Pore Water	250
9.3.2	Diffusion	253
9.3.3	Turbulent Mixing/Bottom Dynamics	253
9.3.4	Bioturbation	254
9.3.5	Gas Convection	254
9.4	A General View of Phosphorus Release	255
10	**Sediments in Aquatic Pollution Control Programmes**	258
10.1	Introduction	258
10.2	Why Use Sediments?	258
10.3	How to Use Sediments	262
10.3.1	Principles of Metal Distribution in Aquatic Systems	263
10.3.1.1	The Type of Metal and Type of Pollution	264
10.3.1.2	The "Carrier Particles"	265
10.3.1.3	The Environmental Characteristics	269
10.3.1.4	Natural Background Levels	271
10.3.2	The Contamination Factor	273
10.3.3	Case Study – River Kolbäcksån	274
10.3.4	The Degree of Contamination	280
11	**Epilogue**	283
Appendix 1	Table for Student's t-Distribution	285
Appendix 2	Computer Programmes in BASIC for Determination of Biotransport, Time Stratification and Sediment Compaction	286
