TABLE OF CONTENTS

	<u>page</u>
FOREWORD	
1 INTRODUCTION AND SURVEY OF RADIOANALYSIS	15
1.1 Introduction	15
1.2 Principles of radioanalysis	18
1.2.1 General	18
1.2.2 Glossary of basic terms and concepts	21
1.3 Scope and contents	32
References	34
2 SAMPLING AND PRECONCENTRATION	37
2.1 Survey and principles	37
2.1.1 Sampling	37
2.1.2 From sample to aliquot	39
2.1.2.1 General	39
2.1.2.2 Granular material	39
2.1.2.3 Water	43
2.2 Sampling procedures	47
2.2.1 Rocks	47
2.2.2 Sediments and pore water	50
2.2.2.1 Sediments	50
2.2.2.2 Pore water	52
2.2.3 Fresh and ground water and related particulate matter	54
2.2.3.1 Fresh water	54
2.2.3.2 Ground water	56
2.2.4 Sea- and estuarine water and related particulate matter and sediments	56
2.2.4.1 Water	56
2.2.4.2 Particulate matter	58
2.2.4.3 Sediment cores	63
2.2.5 Rainwater and dry deposition	63
2.2.5.1 Rainwater	63
2.2.5.2 Dry deposition	63

	<u>page</u>		<u>page</u>
2.3 Preconcentration	64	3.2.1.6 Characteristic parameters of the three types of neutron activation	108
2.3.1 General	64	3.2.2 Delayed neutron counting	109
2.3.2 Fresh water and rainwater	66	3.2.3 Activation analysis with high-energy photons	111
2.3.3 Seawater	67	3.2.4 Principles of charged particle activation analysis (CPAA)	113
2.3.3.1 Survey	67	3.2.5 Principles of prompt techniques	114
2.3.3.2 Scavenging procedures	68	3.2.5.1 Prompt capture gamma-ray measurements (PGAA)	114
2.3.3.3 Ion-exchange and solvent extraction procedures for Th, U and Pu	74	3.2.5.2 Proton induced X-ray emission (PIXE)	115
2.4 Reference materials	75	3.3 Practical aspects of INAA, IPAA and PIXE	117
2.4.1 Principle	75	3.3.1 The radioanalytical laboratory	117
2.4.2 Survey of reference materials and SRM's	77	3.3.2 Irradiation facilities for NAA	124
2.4.3 Use of reference materials and SRM's	78	3.3.2.1 Nuclear reactors	124
2.4.3.1 Reference materials	78	3.3.2.2 Rabbit systems	130
2.4.3.2 SRM's	78	3.3.2.3 Epithermal activation	131
2.4.4 Reference materials for environmental radioactivity and isotopic ratio measurements	79	3.3.2.4 Neutron generators	133
References	80	3.3.2.5 Delayed neutron counting	135
3 INSTRUMENTAL RADIOANALYSIS OF GEOLOGICAL MATERIALS	91	3.3.3 Routing of INAA	135
3.1 Survey	91	3.3.4 Practical aspects of IPAA	142
3.1.1 Activation analysis	91	3.3.5 Practical aspects of CPAA	147
3.1.2 Photon activation analysis	96	3.3.6 Practical aspects of PGAA	150
3.1.3 Charged particle activation analysis (CPAA and HIAA)	97	3.3.7 Practical aspects of PIXE and PIGE	154
3.1.4 Prompt techniques	98	3.3.7.1 Proton induced X-ray emission (PIXE)	154
3.1.4.1 Neutron induced prompt capture γ -ray measurement (PGAA)	98	3.3.7.2 Proton induced prompt gamma emission (PIGE)	157
3.1.4.2 Proton induced X-ray emission (PIXE)	98	3.3.8 The error-budget	158
3.2 Principles	100	3.4 Multielement determination by INAA based on gamma-ray spectrometry	159
3.2.1 Principles of instrumental neutron activation analysis (INAA)	100	3.4.1 General	159
3.2.1.1 Activation	100	3.4.2 A practical procedure for INAA of silicates based on thermal neutrons	160
3.2.1.2 Standardization and flux monitoring	102	3.4.2.1 Preparation of sample and standards for irradiation	160
3.2.1.3 Count rate	103	3.4.2.2 Irradiation and measurements	160
3.2.1.4 Counting result	104	3.4.2.3 Conclusion	163
3.2.1.5 Sensitivity	107		

	<u>page</u>		<u>page</u>
3.4.3 Rocks and ores	164	4.5 Uranium and thorium	234
3.4.4 Meteorites	166	4.5.1 General	234
3.4.5 Sediments	168	4.5.2 Procedures	235
3.4.6 Air-dust	169	4.5.2.1 Uranium	235
3.4.7 Coal and ash	169	4.5.2.2 Thorium	236
3.5 Instrumental neutron activation analysis of the lanthanides	170	4.6 Other elements	237
3.6 Instrumental neutron activation analysis of uranium	174	4.6.1 General	237
3.7 Applications of instrumental neutron activation analysis with an isotopic neutron source and a 14.5 MeV neutron generator	175	4.6.2 Alkali metals	238
3.7.1 Survey	175	4.6.3 Earth alkali metals	238
3.7.2 INAA with isotopic neutron sources in the radio-chemical laboratory	183	4.6.4 Copper and zinc	238
3.7.3 INAA with the neutron generator in the radio-chemical laboratory	184	4.6.5 Mercury	239
3.7.4 Conclusion	187	4.6.6 Indium	240
3.8 Applications of IPAA to silicates	187	4.6.7 Thallium	241
3.9 Applications of CPAA to silicates	189	4.6.8 Tin	241
3.10 Applications of prompt techniques	189	4.6.9 Elements with volatile halides and hydrides: Ga, Ge, As, Se, Sb, Te	243
3.10.1 Applications of PGAA and PIGE	189	4.6.9.1 Survey	243
3.10.2 Applications of PIXE	195	4.6.9.2 Procedures	244
References	197	4.6.10 Vanadium and tantalum	245
4 NEUTRON ACTIVATION ANALYSIS INCLUDING CHEMICAL SEPARATION OF GEOLOGICAL SAMPLES	213	4.6.11 Chromium	245
4.1 Introduction	213	4.6.12 Molybdenum and tungsten	247
4.2 Dissolution procedures and separation schemes	215	4.6.13 Halogens	248
4.3 Lanthanides	221	References	250
4.3.1 General	221	5 RADIOANALYSIS OF WATER	259
4.3.2 Present procedures	222	5.1 Survey	259
4.4 Noble metals	227	5.2 Elemental analysis of fresh water	260
4.4.1 General	227	5.2.1 Survey	260
4.4.2 Separation schemes	228	5.2.2 Routine elemental analysis of rainwater	262
4.4.3 Single element determinations	232	5.2.2.1 Sampling and sample treatment	262
		5.2.2.2 Irradiation and processing of aliquots	262
		5.2.2.3 Results	265
		5.2.3 Special elemental analysis of rainwater	270
		5.2.3.1 Bromine and iodine by isotopic exchange	270
		5.2.3.2 Iodate by anion-exchange	273

	<u>page</u>		<u>page</u>
5.2.3.3 Silver by cation-exchange and subsequent INAA	274	6.4 Isotopic exchange between a solution and a solid	300
5.2.4 Routine elemental analysis of surface and ground water	275	6.5 Reactions in solution	301
5.2.4.1 General	275	6.6 Reaction between a solution and a solid	302
5.2.4.2 Routine procedures	276	6.6.1 Dissolution	302
5.3 Elemental analysis of seawater	283	6.6.2 Leaching	304
5.3.1 Survey	283	6.6.3 Diffusion from solids	308
5.3.2 Routine elemental analysis of seawater by preconcentration on a "Chelex"-column and INAA	283	6.6.4 Sorption	312
5.3.3 Routine elemental analysis of seawater by preconcentration on active carbon	284	6.7 Migration studies in solid-liquid systems	313
5.3.3.1 General	284	6.7.1 General	313
5.3.3.2 Arsenic and antimony	285	6.7.2 The determination of distribution coefficients in seawater	318
5.3.3.3 Vanadium, iodine, tellurium and uranium	285	6.7.3 Radioecological column experiments in the laboratory	319
5.3.3.4 Total antimony, molybdenum and tungsten	286	6.7.4 Laboratory experiments on very slow migration; the case of the actinides	319
5.3.3.5 Chromate, cobalt, nickel and tetra- valent selenium	286	References	322
5.3.3.6 Mercury	286	7 RADIOTRACER EXPERIMENTS IN THE FIELD	327
5.3.4 Special elemental analysis of seawater	289	7.1 Survey	327
5.3.4.1 General	289	7.2 Principles of (radio)tracer experiments in open systems with flow in one direction	329
5.3.4.2 Rubidium and cesium	289	7.2.1 Basic concepts	329
5.3.4.3 Strontium	289	7.2.2 Measurement of linear velocity and flow rate	331
5.3.4.4 Manganese and zinc	290	7.2.3 Measurement of axial dispersion	332
5.3.4.5 Tin	290	7.2.4 Measurement of sedimentation rates	336
5.3.4.6 Nickel	290	7.2.4.1 General	336
5.3.4.7 Noble metals	291	7.2.4.2 Lead-210	337
5.3.4.8 Mercury	291	7.2.4.3 Cesium-137	339
References	292	7.2.5 Measurement of the degree of sediment mixing	341
6 RADIOTRACER EXPERIMENTS IN THE LABORATORY	295	7.2.6 Measurement of filtration velocity in case of horizontal groundwater flow	342
6.1 Survey	295	7.2.7 Measurement of groundwater flow in the unsatura- ted zone by radiocarbon	344
6.2 Basic equations of radiotracer experiments in closed systems	296	7.3 Principles of (radio)tracer experiments in open systems with flow in various directions	346
6.3 Isotopic exchange in solution	298		

	<u>page</u>		<u>page</u>
7.3.1 Survey	346	8.3.3.1 General	401
7.3.2 Measurement of sand or silt flow rates on the sea floor	348	8.3.3.2 ^{234}U - ^{230}Th	402
7.3.3 Radiotracer measurements in water movement in the saturated zone	350	8.3.3.3 ^{235}U - ^{231}Pa	405
7.3.4 Radiotracer measurement on water movement in the unsaturated zone	355	8.3.3.4 ^{232}Th - ^{230}Th	405
7.4 Practical aspects of radiotracer experiments in the field	356	8.3.3.5 ^{230}Th - ^{231}Pa	405
7.4.1 Preparation	356	8.3.4 Environmental laboratory measurements on naturally occurring radionuclides for environmental purposes	406
7.4.2 Performance	359	8.4 Measurements on radioactivity in fresh water	408
7.4.3 Calculations	359	8.5 Measurements on seawater and marine sediments	410
References	360	8.5.1 General	410
8 MEASUREMENT OF NATURAL RADIOACTIVITY	365	8.5.2 Measurement of sedimentation rates and age dating	410
8.1 General	365	8.5.3 Tracing of water masses and sediment movement	414
8.1.1 Survey	365	8.5.4 Environmental measurements	416
8.1.2 Concentrations	368	8.6 Measurements on air	417
8.1.3 Detection by direct measurement of radiation	373	8.6.1 General	417
8.1.3.1 In situ measurements of uranium and thorium	373	8.6.2 Measurement of the residenctime of rainwater by ^{222}Rn and daughter-products	417
8.1.3.2 Laboratory measurements	377	8.6.3 Estimation of the residenctime of a pollutant in tropospheric air	418
8.1.4 Detection by secundary effects	384	8.6.3.1 Use of ^{38}S	418
8.2 Measurement of low-level gamma-activities	389	8.6.3.2 Use of ^{129}I	419
8.2.1 General	389	8.6.3.3 Use of ^{7}Be	420
8.2.2 A low background system (LBS)	389	References	421
8.2.2.1 Set-up	389	9 THE USE OF RADIOACTIVITY DETECTORS AND RADIOACTIVE SOURCES FOR IN SITU ANALYSIS	433
8.2.2.2 Limits of detection and determination	390	9.1 General	433
8.2.2.3 Processing of data	395	9.2 Elemental analysis	435
8.2.3. Anti-coincidence (AC)-counting	396	9.2.1 Survey	435
8.3 Measurements in rocks and sediments	399	9.2.2. Energy dispersive X-ray fluorescence (EDXRF)	437
8.3.1 General	399	9.2.3. In situ instrumental neutron activation analysis and inelastic neutron scattering prompt capture gamma-ray measurements	441
8.3.2 Radon measurements (emanometry)	399		
8.3.3 Age dating by measurement of disequilibrium in the natural decay-series	401		

	<u>page</u>
9.2.4. Elemental analysis by gamma-ray scattering	447
9.2.5. Elemental analysis by nuclear resonance scattering of gamma-rays	448
9.3 Moisture and density gauging	450
References	454
10 CONCLUSION	460
10.1 General	460
10.2 Sampling and preconcentration	460
10.2.1. Sampling	460
10.2.2. Preconcentration	461
10.3 Activation analysis	461
10.3.1 Instrumental neutron activation analysis (INAA)	461
10.3.2 Instrumental photon activation analysis (IPAA)	461
10.3.3 Charged particle activation analysis (CPAA)	462
10.3.4 Prompt techniques (PGAA and PIGE)	462
10.4 Neutron activation analysis including chemical separation of geological materials (RNAA)	462
10.5 Radioanalysis of water	462
10.6 Radiotracer experiments in the laboratory	463
10.7 Radiotracer experiments in the field	463
10.7.1 Transport phenomena in open (channel) systems	463
10.7.2 Measurement of sedimentation rates	463
10.7.3 Radiotracer experiments in systems with flow in various directions	464
10.8 Measurement of natural radioactivity	464
10.8.1 Inventory of natural radioactivity	464
10.8.2 Age determination from disequilibria	464
10.8.3 Tracing of water and air masses and of sediment movement	465
10.9 In situ use of radioanalysis	465
10.9.1 Logging	465
10.9.2 Moisture and density gauging	465
Index	467
