RARE EARTH ELEMENT GEOCHEMISTRY

edited by
Paul Henderson

Department of Mineralogy, British Museum (Natural History), London, U.K.

ELSEVIER
Amsterdam - Oxford - New York - Tokyo 1984

CONTENTS

INTRODUCTION AND BASIC DATA FOR RARE EARTH ELEMENTS		RICHARD STURGEON
1.1.	Introduction and basic data	1
1.2.	Abundance of the rare earth elements in the solar system	1
1.3.	Data presentation	2
1.4.	Oxidation states	3
1.5.	Element co-ordination and ionic radii	3
1.6.	Element substitution and partition	4
1.7.	Geochemical reference literature	5
	References	6
Preface		V
List of Contributors		VII
Symbols		VIII
CHAPTER 1. GENERAL GEOCHEMICAL PROPERTIES AND ABUNDANCES OF THE RARE EARTH ELEMENTS		P. Henderson
1.1.	Introduction	1
1.2.	Abundances in the solar system, Sun and Earth	3
1.3.	Data presentation	6
1.4.	Oxidation states	10
1.5.	Element co-ordination and ionic radii	14
1.6.	Element substitution and partition	17
1.7.	Geochemical reference literature	28
	References	29
CHAPTER 2. MINERALOGY OF THE RARE EARTH ELEMENTS		A.M. Clark
2.1.	Introduction	33
2.2.	Halides	38
2.3.	Carbonates	39
2.4.	Carbonates with fluoride	40
2.5.	Oxides	41
2.6.	Borate	45
2.7.	Silicates	45
2.8.	Silicates with other anions	51
2.9.	Phosphates	51
2.10.	Arsenates	54
2.11.	Sulphate	54
	References	54
CHAPTER 3. COSMOCHEMISTRY OF THE RARE EARTH ELEMENTS: METEORITE STUDIES		W.V. Boynton
3.1.	Introduction	63
3.2.	Condensation theory	65
3.3.	REE abundances in Ca, Al-rich inclusions	71
3.4.	REE in other components of chondrites	86
3.5.	Whole-rock chondrite analyses	89
3.6.	Analyses of achondrites	94

3.7. REE in other differentiated meteorites	103	7.5. Komatiites and associated basic rocks	251																																																																																																																																																				
3.8. Summary of REE cosmochemistry and future directions	106	7.6. Alkaline mafic rocks and associated intermediate and felsic rocks	254																																																																																																																																																				
References	107	7.7. Tholeiitic basalts — continental, back-arc basins and island arcs	262																																																																																																																																																				
CHAPTER 4. PETROGENETIC MODELLING — USE OF RARE EARTH ELEMENTS		7.8. Summary	267																																																																																																																																																				
L.A. Haskin		References	268																																																																																																																																																				
4.1. Introduction	115	CHAPTER 8. RARE EARTH ELEMENTS IN IGNEOUS ROCKS OF THE CONTINENTAL CRUST: INTERMEDIATE AND SILICIC ROCKS — ORE PETROGENESIS																																																																																																																																																					
4.2. Modelling of separation processes	117	R.L. Cullers and J.L. Graf																																																																																																																																																					
4.3. Simple chemical partitioning — the Nernst <i>D</i>	118	8.1. Introduction	275	4.4. Equilibrium melting and crystallization	122	8.2. Andesites and associated rocks	276	4.5. Fractional crystallization: continuous removal of crystals	128	8.3. Anorthosites and associated jotunites, mangerites, and charnockites	281	4.6. Fractional crystallization: crystal zoning-surface equilibrium	133	8.4. Granitic rocks — quartz diorite, tonalite, granodiorite, and trondhjemite	285	4.7. Incremental partial melting	138	8.5. Granitic rocks — monzogranites and syenogranites	293	4.8. Zone melting	140	8.6. REE in hydrothermal systems	301	4.9. Extraction	142	8.7. Summary	306	4.10. Mixing	145	References	308	4.11. References to combined models, and other comments	145	CHAPTER 9. THE MOBILITY OF THE RARE EARTH ELEMENTS IN THE CRUST		References	148	Susan E. Humphris		CHAPTER 5. RARE EARTH ELEMENT ABUNDANCES IN UPPER MANTLE ROCKS		F.A. Frey		5.1. Introduction	153	9.1. Introduction	317	5.2. Alpine peridotites	154	9.2. Factors affecting the degree of mobility of the REE	318	5.3. Ultramafics associated with ophiolites	166	9.3. Igneous crystallization history — the distribution of REE in the unaltered rock and their susceptibility to weathering and alteration	319	5.4. Ocean floor peridotites	170	9.4. The fluid phase	322	5.5. Ultramafic inclusions in basalts and kimberlites	176	9.5. Uptake of the REE by secondary minerals	334	5.6. Implications of REE data for upper mantle composition and upper mantle processes	192	9.6. Conclusions	337	References	196	References	340	CHAPTER 6. THE RARE EARTH ELEMENT CHARACTERISTICS OF IGNEOUS ROCKS FROM THE OCEAN BASINS		CHAPTER 10. AQUEOUS AND SEDIMENTARY GEOCHEMISTRY OF THE RARE EARTH ELEMENTS		A.D. Saunders		A.J. Fleet		6.1. Introduction	205	10.1. Introduction	343	6.2. History of research	206	10.2. Weathering and transport	346	6.3. Ocean ridge basalts	208	10.3. The marine environment	350	6.4. Ocean islands	214	10.4. REE contents of sediments and sedimentary rocks	365	6.5. Ocean plateau volcanism	220	10.5. Diagenesis	367	6.6. Factors controlling the distribution of REE in oceanic basalts	222	References	369	6.7. Summary and conclusions	229	CHAPTER 11. RADIOGENIC ISOTOPES — SOME GEOLOGICAL APPLICATIONS		References	231	C.J. Hawkesworth and P.W.C. van Calsteren		CHAPTER 7. RARE EARTH ELEMENTS IN IGNEOUS ROCKS OF THE CONTINENTAL CRUST: PREDOMINANTLY BASIC AND ULTRABASIC ROCKS		R.L. Cullers and J.L. Graf		7.1. Introduction	237	11.1. Introduction	375	7.2. Kimberlite	239	11.2. Radioactive decay	376	7.3. Carbonatites and associated alkalic silicate rocks	243	11.3. Geochronology — the dating of rocks and minerals	379	7.4. Lamprophyres	249	11.4. Model Nd, or $T_{\text{CHUR}}^{\text{Nd}}$, ages	383			11.5. Isotopes as tracers in petrogenesis	388			11.6. Isotope variations in seawater	405			11.7. Models for the evolution of the Earth's crust and mantle	408			11.8. Lu-Hf isotopes	411			11.9. Concluding remarks	413
8.1. Introduction	275																																																																																																																																																						
4.4. Equilibrium melting and crystallization	122	8.2. Andesites and associated rocks	276																																																																																																																																																				
4.5. Fractional crystallization: continuous removal of crystals	128	8.3. Anorthosites and associated jotunites, mangerites, and charnockites	281																																																																																																																																																				
4.6. Fractional crystallization: crystal zoning-surface equilibrium	133	8.4. Granitic rocks — quartz diorite, tonalite, granodiorite, and trondhjemite	285																																																																																																																																																				
4.7. Incremental partial melting	138	8.5. Granitic rocks — monzogranites and syenogranites	293																																																																																																																																																				
4.8. Zone melting	140	8.6. REE in hydrothermal systems	301																																																																																																																																																				
4.9. Extraction	142	8.7. Summary	306																																																																																																																																																				
4.10. Mixing	145	References	308																																																																																																																																																				
4.11. References to combined models, and other comments	145	CHAPTER 9. THE MOBILITY OF THE RARE EARTH ELEMENTS IN THE CRUST
