Contents

Part I Types of Sedimentary Basins	1
1 Basin Classification and Depositional Environments	3
1.1 Introduction	3
1.2 Tectonic Basin Classification	4
1.3 Pre-, Syn-, and Post-Depositional Basins	10
1.4 Basin Morphology and Depositional Environments	10
Part II Depositional Systems and Facies Models	17
2 Continental Sediments	19
2.1 Glacial Deposits of Lowlands and Shallow Seas	19
2.1.1 Continental Glacial Deposits	19
2.1.2 Glaciomarine Sediments	25
2.2 Fluvial Sediments, Alluvial Fans, and Fan Deltas	29
2.2.1 Bed Forms, Sedimentary Structures, and Facies Elements	29
2.2.2 Alluvial Fans and Fan Deltas	37
2.2.3 Various River Systems and Their Sediments	43
2.2.4 Large-Scale Lateral and Vertical Evolution of Fluvial Systems	51
2.3 Eolian Sediments	54
2.3.1 Introduction	54
2.3.2 Eolian Sands	55
2.3.4 Clay Dunes	63
2.3.5 Eolian Dust, Loess	64
2.4 Volcaniclastic Sediments (Tephra Deposits)	66
2.4.1 General Aspects and Terms	66
2.4.2 Tephra Deposits on Land and Below the Sea	67
2.4.3 Volcaniclastic Sediments in Basins of Various Tectonic Settings	74
2.4.4 Alteration, Diagenesis, and Metamorphism of Volcaniclastic Rocks	76
2.5 Lake Sediments	77
2.5.1 Different Lake Systems and Their Sediments	77
2.5.2 Recent and Ancient Examples of Lake Sediments	90
2.5.3 Specific Features of Lakes and Lake Sediments	92
3 Coastal and Shallow Sea Sediments (Including Carbonates) ...	94
3.1 Beach and Shoreface Sediments	94
3.1.1 Coastal Processes, Beach and Shoreface Sands	94
3.1.2 Storms and Storm Deposits (Tempestites)	100
3.2 Sediments of Tidal Flats and Barrier-Island Complexes ...	109
3.2.1 Tidal-Influenced Environments and Sediments	109
3.2.2 Sediments of Barrier-Island Complexes	121

3.3 Sediments of Shallow Seas (Including Carbonates)	125
3.3.1 Predominantly Siliciclastic Sediments	125
3.3.2 Carbonate Buildups and Reef-Lagoon Complexes	133
3.4 Sediments of Marine Delta Complexes	147
3.4.1 Types of Marine Deltas	147
3.4.2 Sedimentary Processes and Facies of Various Delta Types	149
3.4.3 Facies Architecture, Constructional and Destructional Phases	155
4 Sediments of Adjacent Seas and Estuaries	161
4.1 Introduction	161
4.2 Water Circulation and Sediments	161
4.3 Sedimentary History of Some Modern Adjacent Seas	170
5 Oceanic Sediments	177
5.1 General Aspects	177
5.2 Water Circulation in the Oceans	179
5.3 Hemipelagic and Pelagic Deep-Sea Sediments	185
5.3.1 Overview	185
5.3.2 Deep-Sea Carbonates and Carbonate Dissolution	187
5.3.3 Red Clay and Manganese Nodules	191
5.3.4 Sediments in Zones of Upwelling	192
5.3.5 Siliceous Sediments	193
5.3.6 Marine Phosphorite Deposits	198
5.3.7 Sediments on Marginal and Oceanic Plateaus, Ridges, and Seamounts	203
5.4 Gravity Mass Flow Deposits and Turbidites	206
5.4.1 Gravity Mass Flows	206
5.4.2 Turbidites and Deep-Sea Fan Associations	214
5.5 Erosion and Reworking of Deep-Sea Sediments	231
6 Special Depositional Environments and Sediments	233
6.1 Green Marine Clays	233
6.2 Oolitic Ironstones	235
6.3 Red Beds	238
6.4 Marine Evaporites	242
6.4.1 Models for Evaporite Deposition	242
6.4.2 Sequences, Sedimentary Structures, and Sedimentation Rates	253
6.4.3 Diagenesis and Geochemical Characteristics of Evaporites	257
6.4.4 Salt Structures	259
6.5 Nonactinistic (Precambrian) Depositional Environments	264
6.5.1 The Evolution of the Atmosphere, Hydrosphere, and Climate	264
6.5.2 Precambrian Sediments	267
7 Depositional Rhythms and Cyclic Sequences	271
7.1 General Aspects	271
7.2 Special Features and Examples of Rhythmic Bedding	278
7.3 Depositional Cycles in Lakes, Fluvial and Deltaic Systems	286
7.3.1 Cyclic Sequences in Lakes	286
7.3.2 Sediment Successions in Fluvial and Deltaic Systems	287
7.4 Sea Level Changes and Sequence Stratigraphy	288
7.4.1 General Principles and Terms	288
7.4.2 Changes in Sea Level and Storm Wave Base in Shallow Basins	291

7.4.3 Sequence Stratigraphy in Continental Margin Settings	297
7.5 Long-Term Cyclic Phenomena in Earth's History	304
7.6 Superposition of Cycles of Various Orders and Differing Origin	307
Part III Subsidence, Denudation, Flux Rates, and Sediment Budget	311
8 Subsidence	313
8.1 General Mechanisms Controlling Subsidence	313
8.2 Methods to Determine Subsidence of Sedimentary Basins ...	320
8.3 Modeling of Rift Basins and Observed Subsidence Curves ...	327
8.4 Passive Continental Margins	332
8.5 Subsidence of Basins Related to Tectonic Loading, Subduction, and Strike-Slip Motion	341
9 Denudation: Solute Transport and Flux Rates of Terrigenous Material	345
9.1 Weathering and Soils	345
9.2 Chemical and Mechanical Denudation Rates from River Loads	348
9.2.1 Chemical Denudation Rates	348
9.2.2 Mechanical Denudation from Solid River Load	356
9.2.3 Chemical Versus Mechanical Denudation Rates	362
9.3 Mineralogical Composition of Suspended River Loads	363
9.4 Long-Term Denudation Rates from the Sediment Budget of Various Basins	366
9.5 Tectonic Uplift, Denudation, and Geomorphology	376
9.5.1 Long-Term Denudation Rates from Changes in Topography	376
9.5.2 Geomorphological Consequences of Denudation	378
9.5.3 Interrelationship Between Tectonic Uplift and Denudation	381
10 Sedimentation Rates and Organic Matter in Various Depositional Environments	385
10.1 General Aspects	385
10.2 Average Sedimentation Rates	388
10.3 Production and Preservation of Organic Matter	393
10.3.1 General Aspects	393
10.3.2 Organic Matter in the Oceans	394
10.3.3 Organic Matter Preservation and Black Shales	398
11 The Interplay Between Sediment Supply, Subsidence, and Basin Fill	409
11.1 Introduction	409
11.2 Simple Relationships Between Source Area on Land and Basin Fill	410
11.3 Different Modes of Basin Filling	414
11.4 Vertical and Lateral Facies Associations (Overview)	422
