Preface	v
---------	---

SESSION 1	<i>Displacement: Changes in Length and Angles</i>	1
Introduction	1	
Principles of displacement and strain using simple shear of a card deck	1	
Changes in lengths and angles	3	
Definition: extension $e$	3	
Definitions: angular shear strain $\psi$ , shear strain $\gamma$	3	
Advanced problems (all denoted with stars *)	4	
Answers and comments	4	
Geological significance of length changes: boudinage and folding	7	
Keywords and definitions	11	
Key references	13	

SESSION 2	<i>The Strain Ellipse Concept: Distortion and Rotation</i>	15
Introduction	15	
First group of experiments: the strain ellipse—homogeneous and heterogeneous strain	15	
Second group of experiments: principal finite extensions and rotational component of the strain	16	
Third group of experiments: variations of principal finite extensions and rotation with displacement	16	
Starred (*) questions	17	
Answers and comments	19	
Evolution of extension fissures in shear zones	23	
Boudinage and folding and the strain ellipse	24	
Keywords and definitions	30	
Key references	31	

SESSION 3	<i>An Introduction to Heterogeneous Strain</i>	33
Introduction	33	
Questions and experiments	34	
Starred (*) questions	40	
Answers and comments	42	
Methods of measurement of shear strain in shear zones	44	
Further comments on strain compatibility	46	
Shear zones with wall deformation	47	
Shear zones with dilatation (area or volume change)	48	
En-echelon extension fissures	48	
Shear zones with deformed walls and dilatation	52	
Keywords and definitions	52	
Key references	53	

SESSION 4 *Displacement Vector Fields and Strain* 55

Introduction	55
Questions	55
Starred (*) questions	57
Answers and comments	58
The "movement direction" concept	60
Types of reference schemes to measure displacement	61
The general coordinate transformation and strain	63
Strain ellipse fields and their geological significance	65
Keywords and definitions	70
Key references	71

SESSION 5 *Practical Strain Measurement:  
1. Initially Circular and Elliptical Markers* 73

Introduction	73
Starred (*) questions	78
Answers and comments	81
Strain determination using initially circular objects	81
Strain measurement from initially elliptical objects	81
Effect of non-random orientation of the initial elliptical markers	83
Rapid methods for the determination of tectonic strain	85
Shapes of original particles	86
Keywords and definitions	86
Key references	86

SESSION 6 *Practical Strain Measurement:  
2. Lines* 89

Introduction	89
How many data for a strain determination?	91
The Mohr diagram	93
Starred (*) questions	96
Answers and comments	96
Methods of measuring extension	99
The Mohr circle construction	103
Keywords and definitions	105
Key references	105

SESSION 7 *Practical Strain Measurement:  
3. The Centre to Centre Technique and Strain Partitioning* 107

Introduction	107
The centre to centre method	107
Method 1 "Nearest neighbour" centre to centre technique	110
Method 2 The Fry method	111
Strain partitioning	113
Answers and comments	117
Strain measurement in clastic rocks	117
Keywords and definitions	124
Key references	125

SESSION 8 *Practical Strain Measurement:  
4. Angles* 127

Introduction	127
Strain determination using measurements of angular shear strain	128
Breddin graphs	129

Mohr construction	129
Strain ratio and orientation determined from two or more measurements of shear strain	132
Breddin graph method	132
Mohr construction	132
Starred (*) questions	134
Answers and comments	141
Concluding remarks concerning strain analysis from deformed fossils	147
Keywords and definitions	148
Key references	148

SESSION 9 *Orientation Analysis* 151

Introduction	151
Development of the stereographic and equal area projections	151
Basic plotting techniques	154
Directional sense	155
Rotation sense	155
Angles between lines	156
Bisector of lines	158
Pitch	158
Angles between planes	158
Bisectors of planes	158
Curved planes and lines	159
Rotation of data on projections	160
Rotation about a horizontal axis	160
Rotations about an inclined axis	160
Answers and comments	161
Key references	165

SESSION 10 *Strain in Three Dimensions  
1. Planar and Linear Fabrics* 167

Introduction	167
Description of the position of a point and the directions of lines	167
Displacement in three dimensions	168
Classification of strain ellipsoids	171
Change of orientation of planes as a result of strain	174
Change of orientation of lines as a result of strain	176
Starred (*) questions	176
Answers and comments	178
Measurement of three dimensional strain	178
Types of strain ellipsoid	178
The relationship between the fabric of deformed rocks and the finite strain state	179
Sequence of fabric development arising from the deformation of sediments	185
Changes in orientation of planes and lines as a result of three-dimensional strain	188
The March model for deformed planes and lines	191
Definitions and keywords	193
Key references	194

SESSION 11 *Strain in Three Dimensions  
2. Review of Methods and Representation of Strain State* 197

Introduction	197
Strain measurement: a summary	197
Strain values and their ratios	198
Recording and comparing strain states	199
Shortening or extension measurement	202
Relationships of strain ellipse fields and strain ellipsoid types	205
Relationship of directions of no finite longitudinal strain to the values of the principal longitudinal strains	207

Starred (*) questions	207
Answers and comments	207
Keywords and definitions	214
Key references	214
<b>SESSION 12 Progressive Displacement and Progressive Deformation: Principles</b>	<b>217</b>
Introduction	217
Progressive displacement	218
Progressive strain	219
Starred (*) questions	220
Answers and comments	221
The general progressive deformation process	223
Particle path line fields	232
Keywords and definitions	233
Key references	234
<b>SESSION 13 Measurement of Progressive Deformation</b>	
1. Extension veins	235
Introduction	235
Types of fibrous vein systems	239
Measurement of incremental strains from fibrous vein systems	250
Starred (*) questions	251
Answers and comments	253
Chocolate tablet structure	255
Shear vein systems	257
Keywords and definitions	262
Key references	263
<b>SESSION 14 Measurement of Progressive Deformation</b>	
2. Pressure Shadows	265
Introduction	265
Types of pressure shadows	265
Thin section preparation	270
Measurement techniques	270
Rigid fibre model	271
Deformable fibre model	271
Inequidimensional rigid objects	273
Starred (*) questions	275
Answers and comments	275
Interpretation of strain data	277
Keywords and definitions	279
Key references	280
<b>APPENDIX A Strain Parameters</b>	<b>281</b>
Extension	281
Quadratic extension	281
Logarithmic strain	281
Shear strain	282
Dimensions of strain parameters	282
<b>APPENDIX B Strains from Displacement</b>	<b>283</b>
1. Displacement	283
2. Homogeneous strain	284

3. The strain ellipse concept	284
4. The reciprocal strain ellipse	285
5. Longitudinal strain (extension $e$ ) along any line making an initial angle of $\alpha$ with the $x$ -axis	285
6. Longitudinal strain along any line making a final angle $\alpha'$ with the $x$ -axis	285
7. Relationship between $\alpha$ and $\alpha'$	286
8. Directions of the principal strains of the strain ellipse after deformation ( $\theta'$ )	286
9. Initial directions of the lines which will become the principal strains ( $\theta$ )	286
10. Rotation $\omega$	286
11. Values of the principal strains $\lambda_1, \lambda_2$	287
12. Area change $\Delta_A$	287
13. The shearing strain developed along any initial direction $\alpha$ from the $x$ -axis	287
14. The shearing strain development along a final $\alpha'$ direction from the $x$ -axis	288

## APPENDIX C Displacements from Strain 289

Coordinate transformations and displacement gradient matrices for specific types of strain	290
--	-----

## APPENDIX D Changes of Lengths and Angles in Strained Bodies 293

Changes in length	293
Changes in angles	294
Shear strain	295
Maximum shear strain	296
Source List	297
Index	305
