Preface v

SESSION 15 *Fold Morphology* 309

Introduction	309
Definitions: a single folded surface	309
Fold dimensions	311
Fold shape	313
Fourier analysis of fold form	314
Questions	317
Starred (★) questions	322
Answers and comments	322
Wavelength—amplitude analysis	322
Visual harmonic analysis	326
Calculation of Fourier coefficients	327
Axial trace construction	327
Symmetry of small scale folds	329
Keywords and definitions	329
Key references	332

SESSION 16 *Fold Orientations: Projection Techniques* 333

Introduction	333
Fold axis	334
π -diagrams	334
β -diagrams	335
Axial surface	336
Axial trace	336
Crest plane trace	336
Questions	336
Starred (★) question	339
Answers and comments	339
Concluding remarks	344
Keywords	344
Key references	344

SESSION 17 *Fold Classification* 347

Introduction	347
Fold classification using layer thickness variations (Ramsay, 1967)	348
Questions	349
Starred (★) questions	351
Answers and comments	354
Layer thickness variations	354
Dip isogons	356
r'_2 equations describing fold shape	357
Flattened folds	358
Fold shape in flattened parallel folds	359

Fold shape in flattened Class 3 folds	359
Laboratory formed folds	360
Sorby's "fish-hook" folds	361
Keywords and definitions	362
Key references	363
SESSION 18 <i>Fold Sections and Profiles</i>	365
Introduction	365
Cross section and profile construction	365
Questions	367
Effects of topographic variation on profile construction methods	368
Extrapolations of structural data	368
The Busk Construction	368
Fold reconstruction using isogons	371
Starred (*) questions	374
Answers and comments	374
Concluding comments	381
Keywords and definitions	381
Key references	381
SESSION 19 <i>Fold Mechanisms:</i>	
1. <i>Single Layers</i>	383
Introduction	383
Questions	384
Starred (*) question	387
Answers and comments	387
Wavelength—thickness relationships: theory	387
Wavelength—thickness relationships: measurement	390
Dependence of fold shape on viscosity contrast in single layer buckles	392
High competence contrasts	392
Low competence contrast	392
Cusate-lobate folds	397
Assessing competence contrasts	397
Progressive shape changes during folding	401
Keywords and definitions	403
Key references	403
SESSION 20 <i>Fold Mechanisms:</i>	
2. <i>Multilayers</i>	405
Introduction	405
Questions	406
Starred (*) question	411
Answers and comments	411
Properties of folds in multilayers deduced from the theory of single layer buckling	411
Change of fold shape with packing distance of competent layers	412
Fold styles in multilayers	413
Folds developed independently of gravitational force	415
Folds developed under the influence of gravitational force	424
Anisotropy	426
Geometric development of chevron folds from conjugate kinks	427
Synchronous development of two kink bands	429
Mechanisms of nucleation and propagation of conjugate kink folds	430
Kink band geometry and stress axes	434
Crenulation cleavage	436
Keywords and definitions	442
Key references	442
SESSION 21 <i>Strain and Small Scale Structures in Folds</i>	445
Introduction	445
Questions	445
Starred (*) questions	448

Answers and comments	448
The geometry of flexural folds	448
Tangential longitudinal strain	457
Structural features of rocks deformed by tangential longitudinal strain	459
Folds with combined tangential longitudinal strain and layer parallel shear	461
Proportions of tangential longitudinal strain and layer parallel shear in folds	462
Effects of layer parallel shortening on the strain fields of folds	463
Cleavage and bedding relationships in field interpretations of folds	463
Keywords and definitions	472
Key references	472
SESSION 22 <i>Superposed Folding</i>	475
Introduction	475
Questions and starred (*) questions	477
Answers and comments	484
The folding of non-parallel surfaces	484
Superposed shear folds	484
Fold interference patterns	491
General discussion of interference patterns	493
Geometric analysis of superposed folds using projection techniques	499
Interpretation of deformed lineation geometry in superposed fold systems	501
Keywords and definitions	502
Key references	503
SESSION 23 <i>Fault Geometry and Morphology</i>	505
Introduction	505
Nomenclature of faults	505
Questions	509
Starred (*) question	523
Answers and comments	536
Determination of the movement direction on a fault surface	536
Calculation of the movement vector on a fault surface	536
Internal geometry of ramp-flat thrust sheets	538
Keywords and definitions	539
Key references	541
SESSION 24 <i>Faults and the Construction of Balanced Cross Sections</i>	543
Introduction	543
Questions and starred (*) questions	547
Answers and comments	551
Construction of an undeformed template	551
Line length balancing: Example 1	553
Line length balancing: Example 2	554
Calculation of the depth to detachment	554
Line length balancing in strained rocks	555
Correction of layer thickness in strained rocks	556
Concluding comments	557
Keywords and definitions	557
Key references	558
SESSION 25 <i>Mechanical Analysis of Fractures</i>	561
Introduction	561
Force and stress	561
Stress-strain relationships in a homogeneous, isotropic, elastic body	562
Questions	563
Laboratory tests for rock failure	563
P-wave first motion analysis	566
Shatter cone geometry	568
Keywords and definitions	591
Key references	592

x CONTENTS

SESSION 26 *Ductile and Brittle Shear Zones*

595

Introduction	595
Ductile shear zones	595
Questions and starred (★) questions	598
Answers and comments	608
Separation of shear and dilational components using changes in line directions	608
Separation of shear and dilational components: 1. Unstrained wall rock	620
Separation of shear and dilational components: 2. Strained wall rocks	620
Calculation of shear zone components in sections other than profiles	621
En-echelon vein arrays	624
Keywords and definitions	638
Key references	638

SESSION 27 *Joints*

641

Introduction	641
Geometric classification of joints	646
Questions	647
Answers and comments	651
Joint analysis in uniformly dipping strata	651
Joint analysis in folded strata	653
Concluding remarks	665
Keywords and definitions	665
Key references	665

APPENDIX E *Force and Stress*

Force	667
Stress	667
Analysis of plane stress	668
Stress in three dimensions	671
Stresses acting on a surface inclined to the principal axes of stress in plane stress	670
Stress variations in two dimensions	671

APPENDIX F *Geological Mapping*

Equipment	673
Geological mapping procedures	677
Sample collection and record	681
Concluding remarks	681

APPENDIX G *Mathematical Notations*

1. Roman letters	685
2. Greek letters	686

Source List	687
Index	697
