

THE INTERPRETATION OF IGNEOUS ROCKS

K. G. Cox, J. D. Bell and R. J. Pankhurst

London
GEORGE ALLEN & UNWIN
Boston Sydney

Contents

<i>Preface</i>	page ix
<i>List of tables</i>	xiv
1. <i>Fractionation in igneous processes</i>	1
Introduction	1
The concept of fractionation	2
Classification of fractionation processes	3
Open systems	8
Summary	10
2. <i>Compositional variation in magmas</i>	12
Inter-element correlations	13
Summary of progress	21
Variation diagrams – introduction	22
Triangular variation diagrams	34
The liquid line-of-descent	36
Exercises	40
3. <i>Phase diagrams – introduction</i>	42
Classification of systems	43
Experimental method	46
Representation of results	46
The phase rule	47
Construction of a phase diagram by the quenching method	49
The reading of phase diagrams	51
Binary diagrams	51
Exercises	80
4. <i>Ternary systems – I</i>	83
Representation of composition	83
Liquids projections	85
The solids	86
Primary phase fields	87
Isothermal sections	88
Equilibria involving two solids + liquid	90
Equilibria involving three solids + liquid	95
Equilibrium crystallisation and melting paths in ternary systems	102
Fractional crystallisation paths	109
Pseudoternary systems	110
Some ternary systems of geological interest	113
Exercises	118

5. <i>Ternary systems with solid solutions</i>	page 120
Ternary solid solutions	130
The system diopside–albite–anorthite	131
The system nepheline–kalsilite–silica	133
Ternary feldspars	139
Exercises	143
6. <i>The interpretation of two-element variation diagrams</i>	145
Principles of the mixing calculation	146
Mixing calculations and the formulation of crystal fractionation hypotheses	147
Application to series of volcanic rocks	154
Exercises	174
7. <i>Petrographic aspects of volcanic rocks</i>	176
Introduction	176
The phenocryst assemblage	176
Modal analysis of phenocrysts	181
Altered phenocrysts	181
Resorbed and mantled phenocrysts	183
Xenocrysts	187
Order of crystallisation	188
Quenching textures	189
Final products of solidification	192
Other groundmass textures	194
8. <i>Quaternary systems</i>	197
Representation of composition	197
Sub-solidus joins	198
Liquidus diagrams	201
Crystallisation paths	202
Projection methods	205
The system forsterite–diopside–anorthite–silica	210
Exercises	220
9. <i>Experimental work on natural basaltic and allied rocks</i>	222
Introduction	222
Atmospheric pressure experiments	223
Computer simulation of crystallisation paths	238
High-pressure experiments on dry materials	239
Exercises	256
10. <i>Water-bearing basic rock systems</i>	258
Experiments on basaltic compositions	258
Experiments on synthetic peridotitic compositions	263
Experiments on natural peridotites	265
Phlogopite stability	267
The experiments of Nicholls and Ringwood (1973)	270
11. <i>Compositionally zoned magma bodies and their bearing on crystal settling</i>	272
An ash-flow sheet from Aso caldera, south-western Japan	273
The Shamsan caldera sequence of Aden	276

A model for crystal settling in a non-convecting magma chamber	page 279
Compensated crystal settling	280
Exercises	282
12. <i>Petrographic aspects of plutonic rocks</i>	283
Introduction	283
Chilled margins	283
Cumulates	286
Sub-solidus textures	296
Partial melting of plutonic rocks	305
13. <i>The interpretation of data for plutonic rocks</i>	308
Volume of intrusions	308
Time for emplacement of plutons	310
Flow of magma	312
Some thermal features of intrusions	313
Convection in magmas	315
Crystal settling	316
Layered intrusions	320
Some chemical features of layered intrusions	327
14. <i>Trace elements in igneous processes</i>	332
Introduction	332
Melting and crystallisation models	338
More complex models	347
Application of trace elements to petrogenesis	348
Exercises	358
15. <i>The use of isotopes in petrology</i>	360
Radiogenic isotope variations	360
Strontium isotopes	363
Neodymium isotopes	374
Lead isotopes	375
Stable isotope variations	382
Further reading	394
Exercises	395
Appendices	399
1. Nomenclature of igneous rocks	402
2. Average major element compositions and CIPW norms of common igneous rock types	407
3. Norm calculations	408
Calculation of the CIPW norm	414
Molecular norms	415
4. Calculation of plotting parameters for O'Hara (1968) polybaric phase diagram	416
5. Some representative mineral analyses	419
Answers to exercises	432
References	446
