CONTENTS

PREFACE	v
CHAPTER 1. INTRODUCTION AND HISTORY	1
1.1 Components of geothermal research	1
1.1.1 Temperature and heat distribution within the earth	1
1.1.2 Terrestrial heat flow	2
1.1.3 Heat generation	2
1.1.4 Thermal properties of earth materials	2
1.1.5 Volcanology	3
1.1.6 Geothermal energy	3
1.1.7 Hydrocarbon formation	3
1.1.8 Fluid flow	3
1.1.9 Permafrost	4
1.2 Units	4
1.3 History of geothermal research	6
1.4 The collection of data	8
1.5 Speculations of thermal history	13
1.6 The advent of radioactivity	14
1.7 The first measurements of heat flow	17
CHAPTER 2. MEASUREMENT OF HEAT FLOW ON LAND	21
2.1 Temperature measurement	22
2.2 The use of thermistors	24
2.3 Calibration of thermistors	27
2.4 Thermistors in the field	28
2.5 Thermal conductivity	33
2.6 Heat-impulse methods	34
2.7 The divided bar	36
2.8 Heating probes for down-hole measurement	38
2.9 Conductivity of rock fragments	42
2.10 Conductivity of frozen rocks	44
2.11 Estimation of conductivity	45
2.12 The influence of porosity	52
2.13 Estimation of properties of frozen rocks	53
CHAPTER 3. ANALYSIS AND CORRECTION OF HEAT FLOW ON LAND	57
3.1 Calculation of heat flow	57
3.2 Selection of method of analysis	60
3.3 Correction of measurements	63
3.4 Correction for drilling disturbance	64
3.5 Correction for inclination of the borehole	68
3.6 Correction for climatic change	69

3.7	Correction for topographic relief	75
3.8	Correction for nearby bodies of water	78
3.9	Plane slopes	79
3.10	Lees hills	80
3.11	The sequence and value of corrections	83
3.12	Practical considerations	84
CHAPTER 4. MEASUREMENT OF HEAT FLOW AT SEA		87
4.1	The Bullard probe	89
4.2	The Ewing probe	91
4.3	Development of the sea-floor heat-flow probe	93
4.4	Thermal conductivity of the sea-floor sediments	94
4.5	Steady-state methods	95
4.6	The needle probe	96
4.7	Estimation by water content	98
4.8	Conductivity measurement in the ocean floor	101
4.9	Measurement from floating ice	103
4.10	Measurement in lakes and fjords	104
4.11	Measurement in deep-sea drill holes	105
CHAPTER 5. DISTURBANCES AND CORRECTIONS TO HEAT FLOW IN THE OCEANS		107
5.1	Sources of disturbance	109
5.2	Topographic disturbance	109
5.3	Accumulation of sediment	114
5.4	Sudden deposit of sediment	116
5.5	Water-temperature fluctuations	119
5.6	Measurement in lakes	123
5.7	The Experimental Lakes	124
CHAPTER 6. THERMAL STATE OF A CONDUCTIVE EARTH		129
6.1	The basic theory	132
6.2	The initial state	133
6.3	The meteorite theory	134
6.4	Melting point and adiabatic gradients	135
6.5	Thermal conductivity	138
6.6	Convection in the mantle	140
6.7	Radioactivity	142
6.8	Results of calculations	143
CHAPTER 7. RADIOACTIVITY AND HEAT FLOW ON THE CONTINENTS		147
7.1	Measurement of radioactivity	147
7.2	Production of heat	148
7.3	Distribution of heat flow	154
7.4	Heat-flow provinces	158
7.5	The Sierra Nevada	163
7.6	Extension to non-plutonic rocks	164
7.7	Approximations	168
7.8	The Basin and Range Province	170
7.9	The heat-flow province concept	172

7.10 Temperature in the crust	174
7.11 Frictional heating on faults	178
7.12 Active continental margins	181
7.13 Rifts and passive continental margins	182
CHAPTER 8. THE OCEANIC CRUST	185
8.1 Observed heat-flow patterns	185
8.2 The concept of plate tectonics	186
8.3 The ocean ridges	189
8.4 Thermal models of spreading centres	191
8.5 Age of the ocean floor	194
8.6 Problems near the ridge crest	196
8.7 Heat flow over subduction zones	198
8.8 The marginal basins	201
8.9 Equality of continental and oceanic heat flow	205
CHAPTER 9. GEOTHERMAL ENERGY	207
9.1 Historical background	208
9.2 Definition of resources	209
9.3 Classification of resources	210
9.4 The properties of water	214
9.5 Vapour-dominated reservoirs	216
9.6 Fluid-dominated reservoirs	218
9.7 Chemistry of geothermal waters	218
9.8 Exploration methods	220
9.9 Reservoirs in sedimentary basins	225
9.10 Exploration for sedimentary reservoirs	226
9.11 Geopressure zones	230
9.12 Hot dry rock	233
9.13 Exploration for hot dry rock	234
9.14 The Marysville anomaly	235
9.15 Estimation of the resource	236
CHAPTER 10. CONDUCTION AND CONVECTION	239
10.1 Effects of water flow	240
10.2 Water flow in a borehole	242
10.3 Water flow in fractures	249
10.4 Water flow in permeable rocks	252
10.5 Permafrost	257
10.6 Freezing soils	260
10.7 Vertical water flow	264
10.8 Observed heat-flow patterns	265
CHAPTER 11. DIRECTIONS AND CONCLUSIONS	273
11.1 The significance of heat-flow measurements	274
11.2 Some remaining questions	278
APPENDIX 1. THE ERROR FUNCTION	281

APPENDIX 2. THE REPORTING OF HEAT FLOW	283
REFERENCES	285
