PREFACE	ix	2.2 Temperature 1	19
LIST OF TABLES	xix	2.3 Density	20
		2.4 Viscosity and yield strength	21
CHAPTER ONE			23
CHAPTER ONE			24
An introduction to facies analysis		2.5.2 Temperature	24
m volcanic terrains	3	2.5.3 Volatile content 2	24
		2.5.4 Chemical composition 2	26
Initial statement	3	2.5.5 Crystal content 2	26
Introduction	4	2.5.6 Bubble content 2	26
The facies concept	5	2.6 Strength 2	27
L3 Description of facies	6	2.7 Fluid flow character 2	27
1.3.1 Geometry	6	2.8 Further reading 3	30
1.3.2 Lithology	8		
1.3.3 Sedimentary structures	10		
1.3.4 Sediment movement patterns	11	CHAPTER THREE	
1.3.5 Fossils	11	CHAPTER THREE	
1.4 Facies analysis and interpretation		Volcaniclastic deposits: fragmentation	
 the importance of associations of facies 	11	and general characteristics 3	33
1.5 Summary	12	entransport of the second of t	
1.6 Further reading	12	Initial statement 3	33
		3.1 Introduction 3	33
CHAPTER TWO		3.2 Fragmentation due to magmatic	
THER I WO		explosions 3	34
Some properties of magmas relevant to		3.2.1 Explosive fragmentation from a	
and physical behaviour	15	sealed, near-surface magma	
The state of the s		chamber or conduit 3	35
Imital statement	15	3.2.2 Explosive fragmentation of a	
Magmas – an introduction to their		vesiculating magma erupting	
diversity and character	16	from an open vent 3	36
2.1.1 Classification	16	3.3 Magma mixing as a means of triggering	
2.1.2 Magmatic associations	19	explosive eruptions 4	10

3.4	Phreatic or steam explosions and			4.10.3 Surface features	85	5,8 Accretionary lapilli	126	7.2 Tuldisation	79
	phreatomagmatic eruptions	42		4.10.4 Growth and internal structure	87		126		186
	3.4.1 Interaction with ground water	43	4	11 Subaqueous silicic lavas	88	5.9 Further reading		7.3.1 Thickness 1	187
	3.4.2 Interaction with surface water	45		12 Komatiites – peculiarities of the	00			7.3.2 Basal layers	188
	3.4.3 Lava flowing into water or over		1.	Archaean	90	CHAPTER SIX			188
	water-saturated sediment	45	4	13 Further reading	89			7.3.4 Gas segregation structures 1	190
	3.4.4 Pyroclastic flows moving into	15	т.	13 Further reading	91	Modern pyroclastic fall deposits and	129	7.3.5 Lateral grading 1	193
	water or over water-saturated					their eruptions	127	7.3.6 Compositionally zoned pumice	
	sediment	46	CH	APTER FIVE		WE.	129		194
	3.4.5 Magma rising into a	40	Th	was tubes of tumes lastic lastic 1		Initial statement	129	7.4 Theoretical modelling of the transport	
	hydrothermal system	47	1/11	ree types of pyroclastic deposits and		6.1 Introduction	127	of pumice flows	194
3.5		47	ine	ir eruptions: an introduction	93	6.2 Terminal fall velocity and muzzle	131	or pulmee nows	
0.0	pyroclastic eruptions	17	Init	ial statement		velocity	133	7.5 Form of moving pyroclastic flows: head, body and tail deposits	197
	3.5.1 Juvenile fragments	47 47		ial statement	93	6,3 Hawaiian–strombolian		7.6 Pyroclastic surges as low particle	
	3.5.2 Crystals		٥.١	Introduction	93	6.3.1 Characteristics of the deposits	133	concentration flows	203
	3.5.3 Lithic fragments	54		5.1.1 Pyroclastic fall deposits:		6.3.2 Mechanisms and dynamics	134	Concentration none	203
3.6		54		definition	94	6.3.3 Classification	140	7.7 Elicify sources and	203
3.7		54		5.1.2 Pyroclastic flow deposits:		6.4 Plinian	140	7.7.1 Base sarges	204
3.7	(definition	96	6.4.1 General characteristics	141	7.7.2 Ground surges	205
2 0	and its products	55		5.1.3 Pyroclastic surge deposits:		6.4.2 Internal and lateral changes	144	7.7.5 11011 010 011 011	200
3.8	Epiclastic fragmentation	56		definition	98	6.4.3 Mechanisms and dynamics	148	7.8 Transportation and grain-support	205
3.9	Further reading	57	5.2	Producing pyrociastic fails	98	6.5 Sub-plinian	151	processes in surges	207
				5.2.1 Explosive eruption columns	98	6.6 Ultraplinian	152	1.) Depositional processes III	209
CHA	PTER FOUR			5.2.2 Ash clouds accompanying		6.7 Vulcanian	153	7.10 Tacies characteristics of surgicial	209
				pyroclastic flows	103	6.8 Surtseyan and phreatoplinian	156	7.10.1 Geometry	209
Lave	a flows	59	5.3	Pyroclastic fall deposits: types and		6.8.1 Surtseyan activity and deposits	157	7.10.2 Gramone	
T				description	104	6.8.2 Phreatoplinian activity and		7.10.5 Gording	210
Initia	l statement	59	5.4	Pyroclastic flow-forming eruptions	105	deposits	158	7.10.1 Onape and	210
4.1	Introduction	59		5.4.1 Lava-dome or lava-flow		6.8.3 Mechanisms	162	7.10.5 Composition	211
4.2	Size and form of subaerial lava flows	60		collapse	107	6.9 Distal silicic air-fall ash layers	163		211
4.3	Factors affecting the morphology of			5.4.2 Eruption column collapse	108	6.9.1 Whole-deposit grainsize		7.11 Surges compared with turbidity currents	217
	subaerial lavas	62	5.5			populations	163	7.12 Pyroclastic surges and pyroclastic	215
	4.3.1 Effusion rate	62		description	110	6.9.2 Secondary thickening and		nows relationships	217
	4.3.2 Physical properties	64		5.5.1 Block- and ash-flow deposits	111	bimodality	164	7.13 Further reading	219
	4.3.3 Slope	64		5.5.2 Scoria-flow deposits	111	6.10 Welded air-fall tuffs	165		
4.4	Eruption of subaerial basaltic lavas	64		5.5.3 Pumice-flow deposits or		6.10.1 Characteristics and examples	166		
4.5	Features of subaerial basaltic lava flows	65		ignimbrites	114	6.10.2 Conditions of formation	168	CHAPTER FIGHT	
	4.5.1 Pahoehoe and aa lavas	65	5.6	Origins of pyroclastic surges	114	6.10.3 Thermal facies model	172	CHAPTER EIGHT	
	4.5.2 Flood basalts	71		5.6.1 Surges associated with	* * 1	6.11 Further reading	174	Ignimbrites and ignimbrite-forming	
	4.5.3 Plains basalts	73		phreatomagmatic and		6.11 Further reading		eruptions	223
4.6	Submarine basaltic lavas	73		phreatic eruptions	114			Craptions	
4.7	Subaerial basaltic lavas flowing into			5.6.2 Surges associated with flows	117	CHAPTER SEVEN		Initial statement	223
	water	75		5.6.3 Surges associated with falls	120			8.1 Enigma of ignimbrites	224
4.8	Subaerial andesitic and dacitic lavas	76	5.7		120	Transport and deposition of subaerial	177	8.2 Occurrence, composition and size	225
4.9	Eruption of subaerial rhyolite lava flows	79		descriptions	120	pyroclastic flows and surges	1//	8.3 Eruption sequence and column collapse	22
4.10	Features of subaerial rhyolite lava flows	81		5.7.1 Base-surge deposits	120	Feld January	177	8.4 Source vents	23
	4.10.1 Shape	81		5.7.2 Ground-surge deposits	120	Initial statement	1//	8.4.1 Linear fissure vents	23
	4.10.2 Lithology	83			125	7.1 Subaerial pyroclastic flows as high	177	8.4.2 Ring fissure vents	23
		05		5.7.3 Ash-cloud surge deposits	126	particle concentration flows	1//	0.1.2	

8.4.3 Vent system for the Fish		CHAPTER TEN		11.5.2 'Crystal tuffs' with mixed		13.3 The source vents in flood basalt	
Canyon Tuff	235			pyroclastic and epiclastic		plateau and plains basalt provinces	369
8.4.4 Central vents	237	Epiclastic processes in volcanic			343	13.4 Scoria cones (and pumice cones)	371
8.5 Co-ignimbrite breccias	237	terrains	293	origins 11.5.3 Crystal-rich volcaniclastics	313	13.5 Maars, tuff rings and tuff cones	376
8.6 Co-ignimbrite ash falls	242				345	13.6 Pseudocraters and littoral cones	382
8.7 Depositional facies model	244	Initial statement	293	of largery epictuses sales	347	13.7 Stratovolcanoes	382
8.7.1 Bandelier tuffs and model	244	10.1 Introduction	293	11.6 Overview	347	13.7.1 Morphometry	383
8.7.2 Rio Caliente and Taupo	211	10.2 Importance of erosion and sediment		11.7 Further reading	347	13.7.2 Output rates, repose periods	
ignimbrites	246	transport in volcanic terrains	294			and life expectancy	384
8.7.3 Ignimbrite facies and	240	10.3 Epiclastic sediment transport	297			13.7.3 Eruptions, characteristics	20.
eruption rate	249	10.3.1 Sediment transport not		CHAPTER TWELVE		and deposits	386
8.8 Palaeocurrent indicators	250	dependent on an interstitial		Classification of modern and ancient		13.7.4 Mass-wastage and epiclastic	500
8.9 Secondary deposits		medium	298	classification of modern and arctical			391
8.10 Welding and post-depositional processe	250	10.3.2 Sediment transport involving	270	volcaniclastic rocks of pyroclastic and	349	processes	393
8.10.1 Welding		ice as an essential interstitial		epiclastic origins	347	13.8 Intermediate-silicic multivent centres	395
	251	medium	305	W. C.	349	13.9 Rhyolitic volcanoes or centres	
8.10.2 Vapour-phase crystallisation	258	10.3.3 Sediment transport involving	303	Illitial statement	349	13.9.1 Morphometry	397
8.10.3 Devitrification	258	water as an essential		12.1 Introduction		13.9.2 Output rates, repose periods	205
8.11 Chemical analyses?	258	interstitial medium	200	12.2 Modelli pyrociastic acp	350	and life expectancy	397
8.12 The great Taupo AD 186 eruption	260		308	12.2.1 Genetic classification	350	13.9.3 Eruptions, characteristics	
8.12.1 Early air-fall phases	261	F		12.2.2 Bittiological	353	and deposits	397
8.12.2 Taupo ultraplinian fall deposit	262	air is an essential interstitial		12.3 Classification of lithified, indurated		13.9.4 Caldera sediments and	
8.12.3 Taupo ignimbrite	264	medium	329	and metamorphosed volcaniclastic	10 minutes	domes: La Primavera	402
8.12.4 Overview	265	10.4 Further reading	330	rocks	355	13.9.5 Other craters	403
8.13 Further reading	265			12.4 Descriptive lithological aspects of		13.10 Submarine spreading ridges and	
		Constitution to the second second		ancient volcaniclastic rocks relevant to		seamounts	404
CHAPTER NINE		CHAPTER ELEVEN		determining their genesis	356	13.10.1 Spreading ridges	404
CHAFTER NINE		Crystal-rich volcaniclastics -		12.4.1 Textural	358	13.10.2 Seamounts	406
Subaqueous pyroclastic flows and			222	12.4.2 Compositional	359	13.11 Intra- or subglacial volcanoes	408
deep-sea ash layers	269	pyroclastic or epiclastic?	333	12.5 Use of the terms 'agglomerate',		13.12 Further reading	409
	207	Initial statement	222	'vulcanian breccia' and 'tuff' in		13.12 Purther reading	
Initial statement	269	11.1 Introduction	333	ancient successions	359		
9.1 Introduction	269		333	12.6 The consequences of redeposition		CHAPTER FOURTEEN	
9.2 Types of subaqueous pyroclastic flow	270	V 1	334	on nomenclature	360	Friends de for arcient evolcanic	
9.2.1 Subaqueous pyroclastic flow	270	and and and and		12.7 Nomenclature of quench-fragmented		Facies models for ancient volcanic	413
deposits	271	transportation modes for crystal-rich		and autobrecciated volcaniclastics	360	successions	413
9.2.2 Ash turbidites	275	volcaniclastic deposits	335		361	* 1	413
9.3 Hot subaqueous pyroclastic flows and	213	11.4 Factors influencing high crystal		12.8 Further reading	501	Initial statement	413
subaqueous welding of ignimbrites	276	concentrations	337			14.1 Introduction	413
