SCIENTIFIC RESEARCH

Research interests

Since the beginning of my training as a scientist and throughout my career, my research interests have been focused on multisensory aspects of perception and attention, in both typical and atypical populations. Atypical populations include adults and children with hearing loss, and adults who suffered from brain-damage. In my research I combine methods from human psychophysics, neuropsychology and neuroimaging to investigate the cognitive architecture of multisensory perception, attention and language in humans, as well as their neural correlates.

Current research areas include the study of:

- multisensory contributions to language processing
- multisensory and auditory space perception
- multisensory mechanisms of selective attention
- functional and neural plasticity in deaf individuals and in cochlear implant users

Research group

At the Center for Mind/Brain Sciences (CIMEC), University of Trento, I coordinate a research group denominated Cognition Across the Senses (CATS). The research group includes post-doctoral fellows, PhD students, Master and Bachelor students. CATS pursues three purposes in parallel: (1) basic and translational research; (2) education for students enrolled in psychology programs and for young scientists at the beginning of their career; (3) communication of cognitive neuroscience results to society.

SCIENCE OUTREACH

Events organised (selection)

Pensa trasversale [translation: 'Think Transversal']

In 2010, while I was the Rector's delegate for the recruitment of new bachelor and master students for the Faculty of Cognitive Science, I created and organised a new event for top high-school students, in which colleagues from all the faculties at the University of Trento tackled a single topic (for example, in the first year it was "Music") from different perspectives. This event has now become one of the regular initiatives for high-school students offered by the University of Trento, and it is now in its 7th edition (for further information see the website of the current edition: <http://events.unitn.it/pensatrasversale2016>). For a presentation of the initiative (in Italian) see: www.youtube.com/watch?v=kfNp6iA18WM

Lo studio della mente e l'arte dell'insegnare [translation: 'The study of the mind and the art of teaching']

In 2010, while I was the Rector's delegate for the recruitment of new bachelor and master students for the Faculty of Cognitive Science, I co-organised with Dott. Claudia Cattani a new event aimed at teachers and school head-masters. This event has now become one of the regular initiatives offered by the Department of Psychology and Cognitive Science, and it is now in its 8th edition (for further information see the website of the current edition: <http://webmagazine.unitn.it/evento/cogsci/10767/lo-studio-della-mente-e-larte-dellinsegnare>).

Since its beginning I have regularly participated in this event, by teaching classes on: attention, multisensory perception, auditory and visual disabilities, and cognitive perspectives on approaches to technology.

AttrattivaMente [translation: 'Attractive Mind']

In 2006, I co-organised with Massimiliano Zampini, the scientific event 'AttrattivaMente' (Rovereto, 28/04/2006 – 10/06/2006) to introduce key concepts of cognitive science to the general public.

Teaching to students, teachers and school head-masters

Since 2004 I regularly teach to high-school students, teachers (from primary to secondary school), and school head-masters about the advances in mind and brain sciences, and the notion of cognitive neuroscience that could contribute to improve educational activities. In particular, in the last 5 years I gave lectures on the topics of multisensory attention and

cognitive control, learning disabilities related to sensory deprivations and the relationship between technology and cognition.

In December 2015, I have promoted a lecture in collaboration with Dr. Sara Dellantonio (Dep. of Psychology and Cognitive Science, University of Trento) on the modularity of the mind debate, in the framework of an initiative organised by SIFA (Società Italiana di Filosofia Analitica). The lecture was broadcasted live and followed in high-schools across Italy. A link to my lecture is available at: <https://www.youtube.com/watch?v=PPD9dgEornI>

Other related initiatives include (selection):

Teaching to medical doctors, speech-therapists and rehabilitators

I am regularly invited to give lectures in courses aimed at improving training for medical doctors, speech therapists and rehabilitators. These invitations are typically related to my expertise in multisensory perception and attention, and in the cognitive and neural aspects of deafness and cochlear implantation. As with the training aimed at teachers, I consider training to clinicians an essential part of my science outreach activity.

In April 2016 I have been invited to participate as lecturer in the workshop: "Sordità: lingua dei segni, impianto cocleare e riabilitazione linguistica" [Deafness: sign language, cochlear implant and language rehabilitation]. The workshop was organised by the Department of Developmental Psychology and Socialisation of the University of Padova, in collaboration with the Lions Club Padova "Elena Cornaro Piscopia" and the

“Magarotto” Institute specialised in deaf education. The aim of the workshop, open to specialists as well as the general public, was to discuss the potentials of sign language for deaf rehabilitation. April 2016.

Other related initiatives include (selection):
